Angloplas products helping the fight against cross infection

# Glove and Apron Dispensers Manufactured in the World's First Proven Antimicrobial PVC

Angloplas is a UK plastics product manufacturer who specialise in producing dispensers for the health and hygiene industry. Although these are designed to keep the workplace tidy and uncluttered they are, more importantly, built knowing the control of healthcare-associated infections (HCAIs) are a priority for healthcare providers, and who are employing a combination of infection prevention and control strategies, including hand hygiene, cleaning, training and the adoption of new technologies, to tackle the problem.

As a result, a wide range of infection control products and technologies are emerging on the market, including antimicrobial technology.

With this in mind, during the summer of 2011 Angloplas transferred production of its dispensers, originally produced in a standard PVC material to the the world's first proven antimicrobial PVC with silver ion technology. This helps stop the growth of bacteria and mould and is guaranteed to work continuously for the lifetime of the product, reducing levels of bacteria such as MRSA, E Coli, Legionella, Salmonella and mould by up to 99.99%.

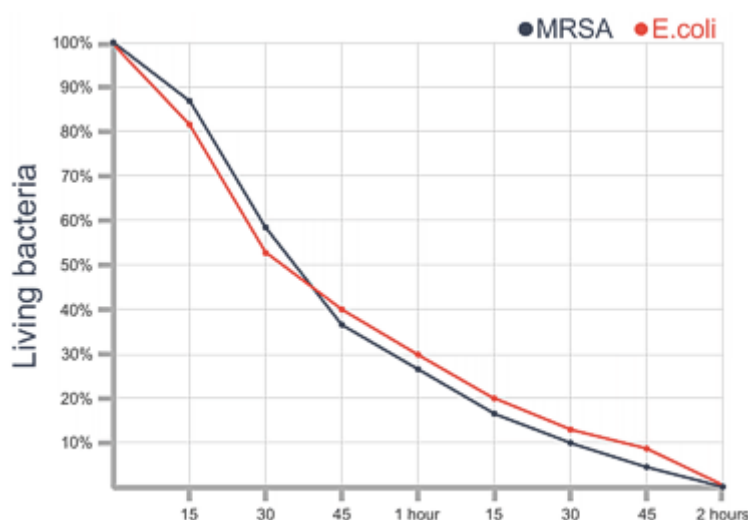

Silver ion technology is a safe, natural antimicrobial that is added at the point of material manufacture ensuring it is present throughout the virgin PVC material. The impregnated material is exclusive to Angloplas and the products we make from it are only available direct from ourselves or from our appointed distributors.

## How does it Work?

Silver ions are added to the virgin material at the manufacturing stage, resulting in an active concentration of silver ions on the surface of the product. When bacteria come into contact with this surface, the silver binds to the bacteria and catalyses an enzyme breakdown in the bacteria, rendering them unable to reproduce and further causing them to die.

The additive in our material has been proven to reduce bacterial contamination in a number of real life environments, including a hospital, care home and food packaging plant.

A pilot trial in an NHS Foundation Trust, showed how protected products demonstrated similar levels of antimicrobial effectiveness in a real-life environment as seen in laboratory tests, e.g. average bacterial reductions of 95%.

The antimicrobial additive used in our material is effective for the life of the product, against a vast range of microbes including:

- ✱ MRSA
- ✱ Clostridium difficile
- ✱ Pseudomonas aeruginosa
- ✱ E-coli - Salmonella
- ✱ Listeria monocytogene
- ✱ Legionella pneumophila
- ✱ Streptococcus faecalis
- ✱ Bacillus subtilis

The graph on the left demonstrates its effectiveness against E-coli and MRSA.

## Antimicrobial Seating - Chairs & Stools

Product	Description	No. Chairs Per PACK	Price per PACK ex VAT
 <p><b>104760-BIO Purity WHITE Chair</b></p>	<p><b>NEW</b> The World's first polypropylene seating containing antimicrobial technology.</p> <ul style="list-style-type: none"> <li>● Wipe clean ultra strong WHITE polypropylene tamperproof stackable chair with a fully welded metal frame.</li> <li>● Both the seat and painted metal frame contain BioCote® Lifelong Antimicrobial Protection to give a fully antimicrobial protected product.</li> <li>● Colour: White seat - Grey frame.</li> <li>● Seat height: 460mm.</li> <li>● SUPPLIED IN PACKS OF 4.</li> <li>● 10 year guarantee.</li> <li>● Ideal for use in environments where hygiene is of paramount importance.</li> <li>● 10 chair transportation trolley available (see below)</li> </ul>	1 pack of
